

A World Without Einstein

Most people know that Einstein was a great scientist, but many think his theories are so esoteric and purely academic that they have nothing to do with our daily lives. Wrong! In our technology-driven society, where even toothbrushes contain microcomputers, Einstein's legacy is everywhere. This book explores the incredible degree to which we all rely on his discoveries. This book was designed to be enjoyable and enlightening, for both those who love science, and those who fear physics and are allergic to math. Each chapter describes in plain English something Einstein discovered and shows why this discovery is important to you. Some claim that if Einstein hadn't made these discoveries, surely someone else would have...eventually. However, some of Einstein's discoveries are so extraordinary that without his genius they might remain undiscovered today, even after 100 years. So, what do we owe to Einstein? For starters, how about: TV CDs GPS DVDs Solar cells Computers Cell phones Laser printers Nuclear weapons Bar code scanners Digital electronics Inertial navigation Laser range finding MRI body scanners Automatic door openers Laser eye and heart surgery Magnetically levitated trains Digital cameras and video cameras Internet and telephone communication Our most powerful telescopes and microscopes And, our understanding of our place in the cosmos Not too shabby for just one guy.
