

Adams of Fleet Street, Instrument Makers to King George III

a?G. Adams in Fleet Street Londona is the signature on some of the finest scientific instruments of the eighteenth century. This book is the first comprehensive study of the instrument-making business run by the Adams family, from its foundation in 1734 to bankruptcy in 1817. It is based on detailed research in the archival sources as well as examination of extant instruments and publications by George Adams senior and his two sons, George junior and Dudley. Separate chapters are devoted to George senioras family background, his royal connections, and his new globes; George junioras numerous publications, and his dealings with van Marum; and to Dudleymas dabbling with a?medico-electrical therapeuticsa. The book is richly illustrated with plates from the Adamsas own publications and with examples of instruments ranging from unique museum pieces - such as the a?Prince of Walesa microscope - and globes to the more common, even mundane, items of the kind seen in salesrooms and dealers - the surveying, navigational and military instruments that formed the backbone of the business. The appendices include facsimiles of trade catalogues and an annotated short-title listing of the Adams familymas publications, which also covers American and Continental editions, as well as the posthumous ones by W. & S. Jones.
