

# Bacteriophage Tail Fibers as a Basis for Structured Assemblies (Biomedical & Nanomedical Technologies (B&nt): Concise Monogr)

This concise monograph series focuses on the implementation of various engineering principles in the conception, design, development, analysis and operation of biomedical, biotechnological and nanotechnology systems and applications. Authors are encouraged to submit their work in the following core topics, but authors should contact the commissioning editor before submitting a proposal: BIoMeDICAL DeViceS & MATeRIALS Trauma Analysis Vibration and Acoustics in Biomedical Applications Innovations in Processing, Characterization and Applications of Bioengineered Materials Viscoelasticity of Biological Tissues and Ultrasound Applications Dynamics, and Control in Biomechanical Systems Clinical Applications of Bioengineering Transport Phenomena In Biomedical Applications Computational Modeling and Device Design Safety and Risk Analysis of Biomedical Engineering Modeling and Processing of Bioinspired Materials and Biomaterials NANOmeDICAL DeViceS & MATeRIALS Bio Nano Materials Nano Medical Sciences Materials for Drug & Gene Delivery Nanotechnology for Central Nervous System Nanomaterials & Living Systems Interactions Biosensing, Diagnostics & Imaging Cancer Nanotechnology Micro & Nano Fluidics Environmental Health & Safety Soft Nanotechnology & Colloids
