

Mechanics

As this text on mechanics is meant for undergraduate students of technical institutions and universities, several changes have been made to improve their conceptual understanding and to attain perfection and command on the subject they are studying. There are various modified aspects which have been added to this revised (second) edition as compared to the first edition. More chapters have also been added to elaborate the text part for more information. Various examples have been incorporated in a number of chapters for better grasp of the subject. The book has also been improved upon from the editorial point of view, in terms of language and typographical corrections. This edition covers the complete syllabus of ugc model curriculum for b.sc. (physics), and would prove to be highly beneficial and interesting for the students in this field, with all the incorporated amendments and required variations. The text also deals with rigour, many other topics included in ugc-net, upsc and other equivalent examinations. About the author: p.k. Srivastava studied for his m.sc. And ph.d. At iit, kanpur where he worked in theoretical particle physics. He teaches physics at dav (pg) college, kanpur. He has authored several books such as problems in physics, optics, and elementary biophysics. Table of contents: space-time structure, newton's laws and galilean transformation non-inertial frames and inertial forces motion in electric and magnetic fields conservation of energy conservation of mome
