BIPM - measurement units The International System of Units (SI) defines seven units of measure as a basic set from which all other SI units can be derived. The SI base units and their **Brief history of the SI - Physical Measurement Laboratory** The SI is founded on seven SI base units for seven base quantities assumed to be in terms of the seven base quantities via a system of quantity equations. **BIPM - BIPM** In the International System there is only one SI unit for each physical quantity. This is either the appropriate SI base unit itself (see table 1.4.2) or the appropriate **IEC - SI Zone** The International System of Units (French: Systeme international d'unités pronounced: [sist?m ??t??nasj?nal dynite] abbreviated as SI) is the modern form of the metric system, and is the most widely used system of measurement. It comprises a coherent system of units of measurement built on seven base units. **The International System of Units** The following definitions of the SI base units are taken from NIST Special Publication 330 (SP 330), The International System of Units (SI).
