

Blue Ribbon Science Fair Projects

All science fair projects, regardless of the level of skill and experience required to complete them, are made up of the same basic elements. This book introduces novice experimenters to the fundamental steps in the creation of a competitive science fair entry, while providing them with a source of projects that are designed to foster a clear understanding of valid scientific procedure. Maxine Iritz explains how to select and research a topic, organize and complete an experiment, observe and record results, develop a logical conclusion and, finally, create an exciting display. A special chapter called Experimenting with the Experiment gives students hints on how to use the books projects as springboards for further study and more sophisticated science fair activities.
