

Case Studies in Time Series Analysis (Series on Probability & Statistics)

This book is a monograph on case studies using time series analysis, which includes the main research works applied to practical projects by the author in the past 15 years. The works cover different problems in broad fields, such as: engineering, labour protection, astronomy, physiology, endocrinology, oil development, etc. The first part of this book introduces some basic knowledge of time series analysis which is necessary for the reader to understand the methods and the theory used in the procedure for solving problems. The second part is the main part of this book case studies in different fields.

The Granger causality test is a statistical hypothesis test for determining whether one time series is However, it remains a popular method for causality analysis in time series Module Descriptions - Department of Statistics and Applied Probability A time series is a series of data points indexed (or listed or graphed) in time order. Most commonly, a time series is a sequence taken at successive equally spaced points in time. Thus it is a sequence of discrete-time data.
