

## Space and Time

Existence of Space declares existence of Time. Space is associated with Actuality. Time is associated with Latency, or Potentiality. Our momentary perception of Time might be compared with the series of dots we perceive on the line made on one side of the 3-dimensional Time cube of the 3-dimensional world. Speed, acceleration, and changes define Time in our dynamic world. The relative difference between our perception of Time and Space makes our world dynamic for us. Space appears to contradict the Time claims. Space influences the direction of the Time flow. Enjoy your reading.
