

Our 12-Dimensional Universe

Do you know what makes up your reality? It is not length, width, depth and time. Instead it is more complex and involves a linked universe to continuously rejuvenate our very essence. Conservation of energy and mass rely on this continuous replenishment but that is not the strangest thing to understand as Anthropic science is helping us understand just how people affect reality. If you ever thought levitation was against physics, this book will help you understand. If you wondered how someone traveling near the speed of light would not ever get old, this may help and if you thought death kills you, you need to read the book as well.
