

# High Energy Physics: Montreal-Rochester-Syracuse-Toronto Physics, MRST 2003: A Tribute to Proceedings / High Energy Physics)

# The 25th Annual Conference on High Energy Joe Schechter (AIP Conference

There are four fundamental forces in nature: gravitational, electromagnetic, weak, and strong forces. The last two are sometimes referred to as nuclear forces. It is the main objective of high energy physics to explore these forces, and hopefully unify them into one fundamental theory. This goal has made high energy physics one of the most ambitious, attractive, challenging, and powerful areas of physics, and has attracted experts from other areas including pure and applied mathematics, and computer science. The MRST annual conference brings together senior and junior investigators and provides a friendly and stimulating atmosphere to discuss recent developments in high energy physics. A broad range of topics in high energy physics was covered in this conference, and therefore these proceedings will be very useful to both senior researchers as well as graduate students in high energy physics, nuclear physics, and computational physics, providing most recent ideas, techniques, and directions for future research in this field.
