

## Laboratory Experiments for General Chemistry

This established manual focuses on using non-hazardous materials to teach the experimental nature of general chemistry. Experiments are written to address students of various academic backgrounds, and differing interests and abilities in chemistry. While most experiments can be conducted in a single three-hour period, some have been designed to be completed over an extended time to illustrate that chemical systems do not work at an arbitrary schedule. Suggestions are provided for combining experiments of shorter length and similar pedagogy.
