

Mobile Satellite Communication Networks

This book provides an overview of mobile satellite systems from their initial introduction and current satellite-pcs to satellite-umts. Readers will gain a solid understanding of the design concepts associated with non-geostationary satellite systems, umts and the role foreseen for the satellite component. Theyll also learn about the inter-working between satellite and terrestrial networks, radio interface technologies and regulatory issues. figures tables mobile communication system evolution mobile satellite systems constellation characteristics and orbital parameters channel characteristics radio link design network procedures integrated terrestrial-satellite mobile networks market analysis future developments
