

## The physics of musical sound

**The Physics of Musical Sound: Physics Today: Vol 20, No 12** The vibrating body causes the medium (water, air, etc.) around it to vibrate. Vibrations in air are called traveling longitudinal waves, which we can hear. Sound waves consist of areas of high and low pressure called compressions and rarefactions, respectively. **The Physics of Music - YouTube** PHYS 103 covers the basic principles of sound and vibration with the goal of understanding how and why musical instruments produce their sounds.
