

Reactor Dosimetry in the 21st Century: Proceedings of the 11th International Symposium on Reactor Dosimetry Brussels, Belgium 18 - 23 August 2002

This work presents the state of the art in reactor dosimetry as applied to nuclear power plants and to high performance research reactors, accelerator-driven systems and spallation sources. The reader will also find the latest advances in computer code development for radiation transport and shielding. In addition, the book focuses on radiation measurement techniques.
