

# The Electromagnetic Wave Simulator: A Dynamic Visual Electromagnetics Laboratory based on the Two-dimensional TLM Method

Excellent coverage of the two-dimensional transmission line matrix (TLM) method of electromagnetic field modeling and TLM electromagnetic wave simulation software for MS-DOS computers is detailed. Divided into 3 sections, it begins with a comprehensive treatment of the two-dimensional TLM method, including all concepts and procedures incorporated in the field-modeling part of the software. An expansive users manual and tutorial, which describes various features of the simulator using numerous examples, comprises the middle section. Concludes with a unique selection of experiments for a typical course in microwaves and electromagnetics.
