

Time (Science Mysteries)

This book on time is one of a series which looks at the quest for scientific solutions to the mysterious, unanswered questions which surround us in our everyday lives. Did time have a beginning? Will it ever end? Could it be possible to control or even travel in time? This book looks at how people have sought to explain the mystery of time, throughout history and across different cultures. It traces scientists attempts to understand what time means to the human body and brain and reveals that, in discovering how time began, scientists may have found clues which suggest how it will end. Lesley Newson has also written *Dealing with Dirt and Meatballs and Molecules*.
