

## Space-Time Real Energy Christmas Tree Space Sails. Volume 13.

This new series of books includes formulaic augmentations to the concepts addressed in Volumes 1 thru 93 of the series Christmas Tree Space Sails and Volumes 1 thru 23 of Superchromatic Beam Augmented Christmas Tree Space Sails. More specifically, the new material includes formulaic modifications to denote the possibility that space-time may produce real electromagnetic and gravitational radiation based on the Uncertainty Principle and the inability of space-time to attain zero real energy density. It may be the case that space-time forever generates energy which superposes from one time interval to the next so that the net electromagnetic and gravitational energy density of space-time as such increases with time despite universal expansion and cosmic red-shifting of these and other background sources in the event that the universe will expand forever. If these non-zero space-time real energy states exist, then it is possible that spacecraft may experience runaway accelerations based on a minimum background frame electromagnetic and gravitational energy densities. For cases where the space-time energies would be black-body in nature, the space-craft may experience acceleration in the spacecraft reference frame that scales according to the fourth power of gamma and more.
