

# Investment Styles, Market Anomalies and Global Stock Selection (Research Foundation of AIMR and Blackwell Series in Finance)

Investment Styles, Market Anomalies, and Global Stock Selection focuses on global factor-return relationships for institutional equity management and style analysis. The author uses a new global factor-return equity database, defined in 1990 and allowed to evolve over time, that was designed to avoid incurring some of the common critiques of market anomaly studies. The framework and data the author presents are intended to enhance the investor/managers understanding of vital global equity investment issues.
