

# Superchromatic Beam Augmented Christmas Tree Space Sails. Volume 23.

The Winter scene was chosen for the front cover image to represent the raw power of the natural order even in the event our universe will expand and perhaps cool forever. Our descendants will find ways to survive and flourish in such a universe. The reader is asked to refer to my books in the series, Christmas Tree Space Sails, for a fuller explanation of the nature of the formula included in this new series. The formulation within this series includes new content including a linear combination power terms based on the capture of so-called superchromatic light. The new superchromatic power terms are self-evident but then so upon careful inspection of the formula for explanatory subscripts and superscripts indicating superchromicity. Here, I assume that incoming superchromatic light from in front of the spacecraft has a beam spectrum for which the spacecraft experiences intake power at a level that scales greater than the fourth power of gamma, but where the spacecraft harnesses the light for propulsion such as by a negative refractive index pull-sail mode. The superchromatic beam options include both Standard Model and Mirror Matter electromagnetic beams and gravitation radiation beams.
