

## Things That Float and Things That Dont

It can be surprising which objects float and which dont. An apple floats, but a ball of aluminum foil does not. If that same ball of foil is shaped into a boat, it floats! Why? And how is it possible that a huge ship made of steel can float? Answering these questions about density and flotation is David A. Adlers clear, concise text, paired with Anna Raffa delightful illustrations. Activities that demonstrate the properties of flotation are included.
