

Natures Predators - Wolves

At one time, wolves had the largest range of all land mammals except humans. Today, wolves are endangered or threatened in many parts of the world. This book examines the physical characteristics, behavior, and hunting habits of this intelligent often misunderstood predator, and the efforts to preserve it.

Keystone Species: How Predators Create Abundance and Stability Most of us think of wolves as packs, and do not realize that the relations within a group of wolves depend on how the group was formed. Some packs are nuclear
