

Relational Mechanics and Implementation of Machs Principle with Webers Gravitational Force

Relational Mechanics A new mechanics intended to replace newtonian mechanics and also Einsteins theories of relativity. It implements Machs principle quantitatively based on Webers force for gravitation and the principle of dynamical equilibrium. It explains Newtons bucket experiment with the concave figure of the water being due to a gravitational interaction between the water and the distant galaxies when in relative rotation. It is intended for physicists, engineers, mathematicians, historians, philosophers of science and students.
